DETAILED ACTION

1. Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1-9 are allowable because none of the prior art discloses an electric potential sensor comprising a driving unit for driving an electrically-conductive movable shutter, wherein the driving unit including a current injecting unit for selectively injecting current into the electrically-conductive movable shutter, and in the combination as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zhao et al. (U. S. Patent No. 5, 517,123) discloses an electrostatic potential sensor having a movable plate and a sensor electrode. The sensor electrode is near the object the potential of which is to be measured. A potential differential between the movable plate and the sensor electrode causes lateral movement of the movable plate.

Buchheit (U. S. Patent No. 4, 149, 119) discloses a potential sensor having a probe electrode, a shutter and a motor for moving/rotating the shutter.

Schoeffthaler et al. (U. S. Patent No. 6, 215,318) discloses a micromechanical magnetic field sensor includes a circuit trace device, which is suspended above a substrate and being deflected elastically. The magnetic field sensing device conducts a predetermined current through the circuit trace device and measures the change in capacitance in dependence on an applied magnetic field.
